

The screenshot shows a macOS desktop with a VS Code editor open. The editor has a sidebar on the left with the Explorer view showing a file structure for a project named 'GITHUBACTIONS'. The main editor area displays a file named 'deploy.yml' with the following content:

```

1 jobs: # contenedor de todas las tareas
2   deploy: # nombre del trabajo específico
3     steps:
4       - name: Setup Terraform
5         run: terraform init
6         working-directory: infra/
7
8       - name: Crear infraestructura
9         run: terraform apply -auto-approve
10        working-directory: infra/
11
12      - name: Obtener nombre del bucket
13        run: |
14          # El flag -raw extrae el texto puro sin comillas ni formato JSON
15          BUCKET=$(terraform output -raw bucket_name)
16          echo "bucket=$BUCKET" >> $GITHUB_OUTPUT
17        working-directory: infra/
18
19      - name: Subir app a S3

```

The terminal window at the bottom shows the output of a `git push` command. It displays a series of error messages indicating that the push failed due to a 'remote rejected' error. The error message is:

```

error: failed to push some refs to 'https://github.com/Jcastanour/demo-gfaction-BETEK.git'

 ! [remote rejected] main -> main (refusing to allow a Personal Access Token to create or update workflow '.github/workflows/deploy.yml' without 'workflow' scope)
error: failed to push some refs to 'https://github.com/Jcastanour/demo-gfaction-BETEK.git'
Enumerating objects: 11, done.
Counting objects: 100% (11/11), done.

```

The terminal window also shows the user's name 'Juan Pablo Castano' and the time '8 minutes ago'.

The screenshot displays the GitHub Actions interface for a repository named 'demo-ghaction-BETEK'. The workflow 'feat(init): setup static site with terraform and github actions #1' is shown as successful. The 'deploy' job, which succeeded 1 minute ago, is expanded to show its steps: Set up job, Checkout code, Configure AWS Credentials, Setup Terraform, Terraform Init, Terraform Apply, Get bucket name, Deploy to S3, Show Website URL, and Post-Configure AWS Credentials. The interface includes a sidebar with navigation options like Summary, All jobs, Run details, Usage, and Workflow file. The top navigation bar shows various GitHub features like Code, Issues, Pull requests, Agents, Actions, Projects, Wiki, Security and quality, Insights, and Settings. A system status bar at the bottom indicates the time as 8:28 PM on Thursday, April 16, 2024.
