The screenshot displays the AWS Management Console interface on a Mac. The top navigation bar shows the AWS logo, a search bar, and account information (United States (N. Virginia), Account ID: 6546-5447-8122, students/pablocastano6@gmail.com). The left sidebar lists various AWS services, with 'EC2' selected. The main content area shows the 'Instance summary for i-0ae1956fa79890639 (ec2-pablocastano6)'. The instance is in a 'Running' state. Key details include: Instance ID (i-0ae1956fa79890639), Public IPv4 address (44.201.96.3), Private IPv4 addresses (172.31.70.146), Public DNS (ec2-44-201-96-3.compute-1.amazonaws.com), Instance type (t3.micro), VPC ID (vpc-00f479057476a2db8), Subnet ID (subnet-0c90bb685bbbd4f4c), and Instance ARN (arn:aws:ec2:us-east-1:654654478122:instance/i-0ae1956fa79890639). A warning message from AWS Compute Optimizer is visible, indicating that the user is not authorized to perform the 'compute-optimizer:GetEnrollmentStatus' action. The bottom of the screen shows the macOS dock with various application icons.
